PROFESSIONAL SUMMARY

DevOps-focused Software Engineering undergraduate with hands-on experience in CI/CD pipeline automation, Docker containerisation, cloud infrastructure (AWS, Azure), and backend systems development. Proficient in GitHub Actions, Linux administration, Rust, PHP, SQL, Node.js, and React. Strong security background with practical knowledge of OWASP Top 10 vulnerabilities and API security. Passionate about building scalable, reliable, and automated infrastructure with clean, maintainable code.

SKILLS

CI/CD & Automation:
- GitHub Actions, CI/CD Pipelines, Docker, Docker Compose, Bash Scripting, Jenkins

Cloud & Infrastructure:
- AWS (Certified Cloud Practitioner), Azure, Linux, Windows Server

Programming Languages:
- Rust, PHP, SQL, Python, Bash

Backend & Web:
- Node.js, React, REST APIs, LAMP Stack (Apache, MySQL, PHP)

Databases:
- SQL, SQLite, MSSQL, Redis, MySQL

Security & DevSecOps:
- OWASP Top 10, SQL Injection, XSS, CSRF, API Penetration Testing, API Security

Version Control:
- Git, GitHub, Branching strategies, Pull Request workflows

Soft Skills:
- Team Collaboration, Analytical Thinking, Attention to Detail, Adaptability, Communication

PROJECTS

Task Manager — CLI Application | Personal Project

Rust | SQLite | Docker | GitHub Actions

- Designed a modular Rust codebase with clean-architecture principles, improving maintainability and enabling unit testing across all modules.
- Implemented a GitHub Actions CI/CD pipeline that automatically runs tests and builds the application on every push, reducing manual build time by 100%.
- Containerised the application using Docker, ensuring consistent runtime environments across development and production and eliminating environment-related bugs.
- Integrated SQLite for persistent storage using parameterised queries to prevent SQL injection vulnerabilities.
- Published build artefacts automatically via GitHub Actions release workflow.

Hire Us — Admin Web Portal | Team Project

React | Node.js | REST API | Linux

- Developed a full-stack admin portal using React (frontend) and Node.js (backend REST API) to manage 50+ service request types and user roles.
- Configured application deployment on a Linux server, managing process lifecycle, environment variables, and server configuration.
- Led end-to-end development lifecycle from requirements gathering to deployment, delivering the project on schedule.
- Delivered live technical demos to 5+ stakeholders, translating engineering decisions into clear business outcomes.

Vulnerable Web Application — Security Lab | University Assignment

PHP | MySQL | Apache | HTML

- Built an intentionally vulnerable full-stack web application to study and demonstrate OWASP Top 10 attack vectors in a safe, controlled environment.
- Implemented and documented 6 vulnerability classes: SQL Injection, stored/reflective XSS, CSRF, broken access control, and plaintext password storage.
- Produced detailed remediation reports for each vulnerability, reinforcing secure-by-default coding standards applicable to DevOps security reviews.
- Achieved full marks on the university cybersecurity assignment.

EDUCATION

BSc (Hons) in Software Engineering — Currently Reading

SLIIT City University | 2023 – Present

G.C.E. Advanced Level — Technology Stream

Mahanama College, Colombo | Passed

G.C.E. Ordinary Level

Mahanama College, Colombo

CERTIFICATIONS

- AWS Certified Cloud Practitioner — **Amazon Web Services**
- Jenkins: Automating Software Development and System Administration – **LinkedIn Learning**
- API Penetration Testing — **APISec University**
- API Security Fundamentals — **APISec University**
- The Complete Python Programming Course — **Udemy**

EXTRA-CURRICULAR ACTIVITIES

- Old Boys' Association, Mahanama College — Event coordination and organisational initiatives (2025–Present)
- Photography Group, Young Zoologists' Association — Field photography and visual content contribution (2025–Present)
